The resource person delivered the talk on ways of design thinking and design aspects. The students were interactive during the session by asking the resource person questions & doubts. The topic later was converged to the design thinking like empathy, test, design, prototype and more. The session was interesting and involved the students. The session also had hands-on training with thinking a word and its meaning (like SILENT). Later, the same word can be used to define another meaning in design thinking (like changing SILENT to LISTEN) and pass it to the friend. Students' involvement amazed the resource person and he appreciated the organizing committee and management for the invitation and support.

The session ended with Ar. Srikanth K S referring to a video on the TEDx talk regarding the water problem in the desert area like Rajasthan and how the company eased the process of bringing water to home. Used flower can be recycled into intensive stick etc
