DEPARTMENT OF INFORMATION SCIENCE AND ENGINEERING

NEWS LETTER 2024-2025(ODD SEMESTER)

INFONITE

ABOUT THE DEPARTMENT:

The Department of Information Science and Engineering became a part of this esteemed organization in the year 2003 with intake of 60 students. It is recognized by AICTE, New Delhi, India and affiliated to VTU, Belagavi, Karnataka. The course has become popular among students due to the achievements and rigor. The department has smart classrooms with projectors and computer laboratories with high-end systems supporting Wi-Fi facility.

The Department has 08 professionally qualified faculties out of which one faculty with doctorate degree and 3 faculties are pursuing Ph.D. The teaching faculties and technical staff members are committed to continuously improve the quality of education by enhancing the knowledge of students and also involved in R&D activities with successfully bagging funded projects worth Rs 14,60,700/- from various government and funding agencies. Visvesvaraya Technological University, Belagavi, has granted the RESEARCH CENTRE (Ref wide: VTU/Aca-LIC//2019- 20/SO/3181/56 Dated 6th Aug 2019) to promote R &D activities for both staff & students at the Department.

VISION:

To be recognized nationally as an accomplished department producing global leaders and researchers as committed, enthusiastic and excellent ethical women technical graduate for the better tomorrow.

MISSION:

M1: To provide Students with Innovative and research skills, which is need of the hour for technical students.

M2: To impart knowledge to the students of Information Science and Engineering with relevant core and practical knowledge inculcating real time experience in the promising field of computing.

M3: To prepare the graduates to meet information technology challenges with a blend of social, human, ethical and value based education.

PLACEMENT DETAILS 2024-2025

Total Strength: 67

Total Eligible Students: 60

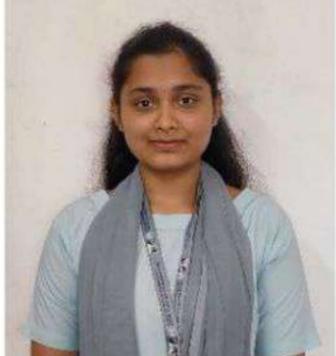

Total Students Placed: 36

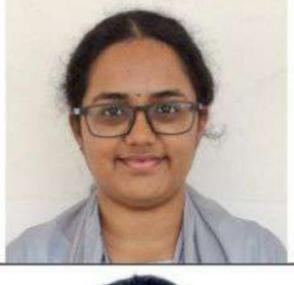

Highest Package = 18.7 Lakhs Per Annum

Avg Package = 7.80 Lakhs Per Annum

Sl.No	Student Name	USN	Name of the Company Placed	CTC	Photos
1.	Nagaranjini Singh R J	4GW21IS026	Lowe's India	18.7 LPA	
2.	Bharani B	4GW21IS009	Lululemon	14 Lakhs	
3.	Indushree K N	4GW21IS019	Thoughtworks	11.1 LPA	

4.	Anagha M Purohit	4GW21IS002	Eli Lilly	Intern with a Stipend of Rs. 30k/Month (Based on their performance during internship, If converted to full time the salary package will be 11 LPA)	
5.	Anvitha B H	4GW21IS005	Eli Lilly	Intern with a Stipend of Rs. 30k/Month (Based on their performance during internship, If converted to full time the salary package will be 11 LPA)	
6.	Divya Shree S	4GW21IS017	Eli Lilly	Intern with a Stipend of Rs. 30k/Month (Based on their performance during internship, If converted to full time the salary package will be 11 LPA)	
7.	Monisha S	4GW21IS025	Eli Lilly	Intern with a Stipend of Rs. 30k/Month (Based on their performance during internship, If converted to full time the salary package will be 11 LPA)

DEPARTMENT ACHIEVEMENTS**MEMORANDUM OF UNDERSTANDING (MOU)**

Name of the company: Information Sharing and Analysis Center (ISAC), Mysuru.

Signing of MOU between GSSSIETW, Mysuru & Information Sharing and Analysis Center (ISAC), Mysuru on 16th October 2024.

Linux FOSS – Student Club Activities

One day Seminar on "The Power of Linux: Exploring Key Operating System Concepts", on 6th December 2024.

INNOVATE NXT 2024

Department of Information Science & Engineering of GSSSIETW, Mysuru had organized “**INNOVATE NXT-2024**” Ideathon in Association with **DLithe Consultancy Services Private Ltd, Bengaluru** on **5th November 2024** at M.Govinda Rao Memorial Hall, GSSSIETW from **9:30 am to 6:00 pm**.

The event was inaugurated by the Chief Guest **Dr. Yogisha S**, Founder & CEO, Skanda Life Sciences, Bengaluru and Guest of Honor **Mr. Raghavendra Ganiga**, Founder & CEO, Mobiezy, Bengaluru in the presence of **Dr. M Shivakumar**, Principal, GSSSIETW and **Dr. Gururaj K S**, Prof & Head, Dept. of ISE by offering flowers to Visionary and Founder Secretary Late **Prof. B.S. Pandit** and Late **Vanaja B Pandit**, Former Hon. Secretary, GSSS (R). The event was coordinated by **Dr. Anand M**, Associate Professor & **Smt. Chaya P**, Asst. Professor Dept. of ISE.

TECHNICAL EVENTS CONDUCTED UNDER TECHNICAL FORUM- INFONITE

About the forum:

The department has a student forum named INFONITE (Information Infinite) set up in the year 2011. The forum provides platform for students to showcase their technical abilities beyond the ambit of academics. INFONITE conducts various technical events, technical talks, workshops, internship programs and industry visits.

Two days workshop on “Data Structures Applications using Python” from 21st to 22nd October 2024 by IVIS labs Pvt. Ltd. Mysuru.

Three Days workshop on “Open-Source Mobile App Development from Data In-sights with Power BI to UX Excellence” from 24th to 26th October 2024 by Bharath T S, Director, iRobo Automation Pvt. Ltd.

Two Days workshop on “Applications of Cryptography and Network Security” from 29th to 30th November 2024 by Soundarya B C, Total Electro Technologies.

PARENTS - TEACHERS MEETING

The department has organized **Parents-Teachers Meeting** (Odd Semester) for the 3rd, 5th, 7th semester students of ISE was scheduled on **November 11, 2024**.

4	Girish S C (4NI20PCS01)	2020	Completed Comprehensive Viva Voce	Dr. Jayasri B S	NIE, Mysuru	VTU University

TECHNICAL ARTICLES BY STUDENTS

DeepSeek: Pushing AI to New Frontiers Human – Like Thinking

The artificial intelligence landscape is evolving at breakneck speed, with models like OpenAI's ChatGPT and Google's Gemini leading the charge. Now, a new contender—**DeepSeek**—has emerged from China, offering a fresh approach to AI efficiency and reasoning. Founded in 2023 by **Liang Wenfeng**, DeepSeek distinguishes itself with a research-driven philosophy, prioritizing innovation over commercialization. Unlike many AI giants, its team consists largely of young researchers, including PhD holders, focused on pushing AI's theoretical boundaries.

A Smarter, More Efficient AI

Traditional AI models, such as ChatGPT, rely on **dense transformer architectures**, engaging nearly all their parameters for every query—a computationally expensive approach. DeepSeek, however, adopts a **Sparse Mixture-of-Experts (MoE)** design, functioning like a team of specialists where only the most relevant "expert" is activated per question.

For instance, when answering a medical query, DeepSeek doesn't waste resources processing unrelated data. Instead, it selectively engages **just 37 billion of its 671 billion parameters**, drastically cutting energy use while maintaining accuracy. This efficiency translates to **faster responses** and **lower operational costs**, making AI more scalable and sustainable.

Mimicking Human-Like Reasoning

Beyond efficiency, DeepSeek stands out for its **Chain-of-Thought (CoT) reasoning**. Unlike conventional AI that often delivers quick but superficial answers, DeepSeek breaks down complex questions into logical steps—sometimes even asking follow-up questions to refine its understanding. This mirrors human problem-solving, where we analyze, reconsider, and synthesize information before responding.

Additionally, DeepSeek employs **reinforcement learning (RL)**, allowing it to learn from interactions like a student refining their knowledge through feedback. Over time, this self-improvement mechanism helps the model generate **more precise and context-aware responses**.

Breaking Free from Hardware Dependencies

While most AI leaders depend on **NVIDIA's A100 and H100 GPUs**, DeepSeek has taken a bold step by using **Huawei's Ascend AI chips**. This strategic shift not only sidesteps U.S. export restrictions but also signals a move toward **technological self-reliance**. By reducing dependence on Western hardware, DeepSeek could influence the future of AI infrastructure, particularly in regions facing geopolitical trade barriers.

Ethical Considerations and Transparency

DeepSeek's rise hasn't been without scrutiny. Like many AI models trained on vast datasets, questions linger about its **data sources**, though no formal accusations have been made public. Additionally, as a China-based company, DeepSeek likely adheres to **local regulations on content moderation**, which may involve stricter filtering than Western counterparts. These factors highlight the ongoing global debate over **AI ethics, data governance, and censorship**.

A Research-First Vision for AI's Future

Founder Liang Wenfeng envisions DeepSeek as a **scientific trailblazer** rather than a purely profit-driven enterprise. This ethos is reflected in its **open-weight model releases**, fostering transparency and collaboration. Already, major platforms like **Perplexity AI** and Microsoft's **Azure** have integrated DeepSeek's technology, validating its potential.

As AI advances, DeepSeek represents a shift toward **smarter, leaner, and more adaptive systems**. By combining **MoE architecture, human-like reasoning, and hardware independence**, it challenges the assumption that bigger models are inherently better. Instead,

DeepSeek proves that the next leap in AI may come from **how machines think**—not just how much they compute.

In a world racing toward artificial general intelligence (AGI), DeepSeek’s approach could redefine what’s possible—ushering in an era where AI doesn’t just answer questions but **truly understands them**.

As a tech student witnessing this AI revolution, what excites me most about DeepSeek is its dedication to thinking differently—both literally and figuratively. Its focus on reasoning, specialized expertise, and efficient learning feels like a major leap toward AI that thinks *with* us rather than *for* us.

DeepSeek is not just another chatbot. It’s a system designed to reason, learn, and evolve—challenging the norms and proving that the future of AI isn’t just about raw power, but intelligent, human-like thinking.

-Dhanya R Bhat

-USN:4GW23IS009

Neuromorphic Computing: The Future of Human-Like AI

Imagine a world where machines don’t just process data—they think, learn, and adapt like humans. This is no longer just science fiction. Thanks to neuromorphic computing, we are on the cusp of a technological revolution that could redefine what it means for artificial intelligence to be “intelligent.”

Traditional AI systems rely on massive power-hungry processors and static programming to complete tasks. While powerful, they struggle with real-time decision-making, learning on the fly, or understanding human emotions. Neuromorphic computing changes that paradigm entirely by mimicking the human brain’s structure and function.

Why Neuromorphic Computing?

Today’s world demands smarter, faster, and more efficient machines. Think of autonomous vehicles that need to make split-second decisions to avoid accidents, or robotic assistants that must respond to human emotions in real time. These scenarios require more than just computation—they require cognition.

Neuromorphic systems use artificial neurons and synapses to process information similarly to the brain. This allows machines to not only respond quickly but to learn and evolve without constant reprogramming.

How It Works

Neuromorphic computing is powered by a combination of innovative technologies:]

- **Spiking Neural Networks (SNNs):** These networks mimic biological neurons by firing signals only when necessary, vastly improving energy efficiency.
- **Neuromorphic Chips:** Processors like Intel’s Loihi and IBM’s TrueNorth can process sensory information in real time, enabling more adaptive AI.
- **Memristors:** These components function like brain synapses, retaining memory without needing power and allowing machines to function more independently.

Real-World Applications

Neuromorphic computing is already being tested in cutting-edge fields:

- **Robotics:** Intel’s Loihi chip allows robots to learn from observation—just like children.
- **Space Exploration:** NASA is experimenting with neuromorphic chips in probes that must operate autonomously in deep space.

- **Healthcare:** Medical researchers are developing brain-computer interfaces that let paralyzed individuals control devices with their thoughts.

A Glimpse into the Future

The possibilities of neuromorphic AI are endless:

- Smartphones that recognize and respond to your emotional state.
- Wearables that detect health issues before symptoms appear.
- Autonomous drones that perform high-speed disaster rescue missions.
- Smart cities with adaptive traffic lights and energy systems.

In this future, AI won't just compute—it will understand. It will be intuitive, empathetic, and far more energy-efficient.

Challenges Ahead

Despite its promise, neuromorphic computing is still in its infancy. The hardware is complex and costly to manufacture. There's also no universal software platform, making integration difficult. As research continues, widespread adoption may still be years away.

The Next AI Revolution

As technology advances, the boundary between human and machine intelligence is becoming less distinct. Neuromorphic computing could be the bridge that brings us machines capable of thinking—not just calculating.

“The future of AI isn't just about speed and power; it's about intelligence. And with neuromorphic computing, that future has already begun.” So, the question remains—**would you trust a machine that thinks like a human?**
